AB - J03180529 A crimp yarn is composed of two kinds of synthetic fibre multifilament (A) and (B), each single filament (a) of multifilament (A) and each single single filament (b) of ' multifilament (B) is entangled irregularly. The correlation of two kinds of synthetic fibre multifilament (A) and (B) forming the crimp yarn satisfy (1) fineness of A = 0.3 B to 0.7 B, (2) number of single yarn in A is less than B, (3) fineness of single filament a = 1.2 to 3.0 b, where a = 7-60 and b = 3-25, (4) cross-sectional shape of single filament of both (a), (b) is Y type, (5) degree of deformation of single filament a = 0.2 b to 0.7b, where a = 1.2-5 and b 2-7, and (6) number of crimps of a is less than b.

- USE/ADVANTAGE - Useful for a tufted carpet, esp. cut pile carpet. Since the carpet is exposed multifilament having thick fineness of single filament and multifilament having thin fineness of single filament support that having thick fineness of single filament, the carpet has rich compressibility and excellent bulkiness in spite of a soft touch. (11pp Dwg.No.0/4)

IW - CRIMP YARN CUT PILE CARPET BULK COMPRISE TWO TYPE SYNTHETIC FIBRE MULTIFILAMENT RESPECTIVE SINGLE FILAMENT ENTANGLE IRREGULAR

IKW - CRIMP YARN CUT PILE CARPET BULK COMPRISE TWO TYPE SYNTHETIC FIBRE MULTIFILAMENT RESPECTIVE SINGLE FILAMENT ENTANGLE IRREGULAR
